react-reconciler

This is an experimental package for creating custom React renderers.

Its API is not as stable as that of React, React Native, or React DOM, and does not follow the common versioning scheme.

Use it at your own risk.

API

```
var Reconciler = require('react-reconciler');

var HostConfig = {
  // You'll need to implement some methods here.
  // See below for more information and examples.
  ...
}
```

install

> npm i react-reconciler
