

finalizeInitialChildren

...

```
finalizeInitialChildren(element, type, props) {  
  if (type === 'Song') {  
    const Song = element;  
    sequencer.ready(() => {  
      Song.render();  
    });  
  }  
},
```

...

And this concept is universal.

You can build anything using components abstraction.
