Elements of The Same Type

```
<div
  className="before"
  title="noice"
/>
```

Elements of The Same Type

```
<div
  className="before"
  title="noice"
/>

<div
  className="after"
  title="noice"
/>
```

By comparing these two elements, Reconciler specifies what is going to be changed.

In this case, React-DOM knows how to only modify the className on the underlying DOM node.
