Component

Function or class with a *render()* method that inherits from *React.Component*.

Instance

```
class PokemonTrainerPicture extends React.Component {
  constructor(props) {
    super(props);
    this.imageRef = React.createRef();
  }

  render() {
    const { imageSrc } = this.props;
    return (
      <img
        className='pokemon-trainer--picture'
        ref={ this.imageRef }
        src={ imageSrc }
      />
...
```
